

How to care for leather shoes

In order for our leather shoes to serve and suit you for a long time, you need to take good care of them. We recommend waterproofing with a leather product before the first use. Continual care can be summarized in three points:

- I. cleaning - if the shoes have been sealed, cleaning them will be easier. On smooth leather, use a damp clean cloth or a soft sponge and wipe the shoes. We recommend cleaning nubuck dry with appropriate brushes or a special cleaning rubber. It's possible to use cleaners on both types of leather, which can make cleaning easier. Remember, the nubuck is more absorbent and it will take longer to dry.
- II. treatment - to keep the leather supple, you want to take care of it and moisturize it, just like your skin :-) Find a product suitable for the type of leather shoes you have and just follow the instructions.
- III. weatherproofing - before the first use and after treatment it is suitable to use a sealing product. It can protect your shoes from moisture, and help repel dirt.

Here's a few final tips: :-)

Do not wash your shoes in the washing machine. Do not dry too close to heat sources. Brush or rub gently with care when using a brush or sponge. Avoid soaking.

Most importantly, enjoy your peerko shoes!

We wish you many comfortable and healthy steps in our footwear.
